

# Water Protectors

ReSound Water protectors are Earmoulds that are designed to protect the ears from water and infection.

Many people suffer from common water related ear irritations, conditions such as Surfer's ear, Swimmer's ear and ear ache can be reduced by regularly using Water Protectors during water sports. Water Protectors are also useful for common conditions such as perforated eardrum, Grommets and Ventilations tubes. People with conditions such as these will most likely be advised by their doctor to keep their ears clean and dry while healing to avoid further complications and infection.

## SURFER'S EAR

A condition of the ear canal where the bony lining under the skin develops a number of lumps (exostoses). These cause a partial or complete blockage of the ear canal. Water and debris can get trapped behind the narrowing and result in infection. It is best to keep your ears warm and dry when surfing by wearing earplugs but a surf hood in the winter will provide good protection too.

## OTITIS EXTERNA

An inflammation, irritation or infection of the outer ear and ear canal. Keeping the ear dry when exposed to water such as when swimming, taking a shower or playing water based sports is essential during medical treatment and as a preventative measure once the condition resolves.

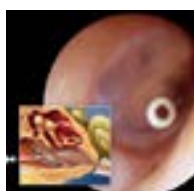

## PERFORATED EARDRUM

A hole in the eardrum can be caused by trauma or disease. The hole exposes the middle and inner ear to damage or additional infection. The doctor will likely advise the patient to keep the ear clean and dry while healing, and a water protection Earmould may be suitable.

## GROMMETS AND VENTILATION TUBES

A grommet is a tiny tube inserted into the eardrum to allow air to enter into the middle ear. Jumping and diving into the water is best avoided unless earplugs are used. Grommets cause no discomfort while in place. The healing ability of the eardrum is so great that it usually pushes the tube out in 6-12 months, leaving the eardrum intact.

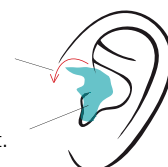

## INSERTION INSTRUCTIONS

### STEP 1

Roll the top of the hearSaver about a quarter turn forward.

Focus only on getting the bottom of the HearSaver into your ear canal first. Do not force it. Ease it into the canal.

### STEP 2

Roll the top back and lock it into place.

### STEP 3

Adjust at these points to make sure the HearSaver is securely positioned in place.

## CLEANING AND STORAGE

Wash your earplugs in mild soap and warm water.

After cleaning and using, always store your HearSavers in the black pouch provided. This prevents them getting lost.

## COLOURS AVAILABLE

NOTE: Colour choice might be limited, depending on material type.

Protect your ears with GN

# Water Protectors

GN Water Protectors are earmoulds specifically designed to protect the ear from water during activities such as swimming and surfing. They assist with the prevention of ear disease and infection, and reduce common irritations that are associated with water sports.

GN Swimmer Plug features removal cord. Available in a range of colours.

GN does not guarantee that these accessories will prevent water leakage in all circumstances. Please speak to your medical professional for further recommendations and advice.

Many people suffer from common water related ear irritations, conditions such as Surfer's ear, Swimmer's ear and ear ache can be reduced by regularly using Water Protectors during water sports. People with conditions such as these will most likely be advised by their doctor to keep their ears clean and dry while healing to avoid further complications and infection.

GN Water Protectors work to protect your ears against water and moisture during water sport activities. They come in a range of fun colours and are designed to include a safety cord to ensure they stay together and are not easily lost during water sports.
